CODE ACADEMY 123

Having fun learning programming with games and robotics

ADULT EDUCATION

PYTHON CRASH COURSE

Enhance your résumé by adding Python as your new programming skills! Python is a language used by many businesses across the globe and it is often the first language taught at many top universities.   In this course you will learn the most important programming constructs such as variables, conditional statements, loops, functions, data structures, classes, …   Practical exercises along the way, will enable you to acquire a solid foundation. No prior programming experience is required. Python Crash Course is a good stepping stone for further Python learning in web development, data science, and machine
